

Wild Remedies Herb Labels

If there's one thing we've learned over and over again, it's to label your herbs and your creations! We've created the following labels to make it easy for you. These labels have the common name, energetics, and plant family already listed. You can print the labels and then fill in the information specific to your harvest, such as species and harvest location and date.

Printing the Labels

You have a couple of options for printing these.

#1 Print on Labels

We designed these to fit 2" x 2" Avery labels. There are two color options:

- **Brown Kraft:** Avery 22846
- **White:** Avery 22806

You can find these labels in large office supply stores or by searching online.

#2 Print on Paper

You can also simply print these labels on paper, cut them out, and tape them to your jars. You can then choose any type of paper you want.

IMPORTANT

When you select **print** on your computer, print pages 2-4, so you do not print **this** page on a label. You can also print page 5 for blank labels.

If your printout does not fit the labels properly, make sure "Scale to Fit" is not selected in the print dialog box. These should be printed at 100% scale.

If the printouts are just a little off, it may be a result of how the sheets are being fed into your printer. Every inkjet or laser printer has a different way paper is fed into it, and it may require some adjusting to get the labels to fit perfectly.

APPLE BARK

cool, dry

Botanical Name:

Family: Rosaceae

Harvest Location:

Harvest Date:

APPLE FRUIT

cool, moist

Botanical Name:

Family: Rosaceae

Harvest Location:

Harvest Date:

APPLE LEAF

cool, dry

Botanical Name:

Family: Rosaceae

Harvest Location:

Harvest Date:

BURDOCK

cool, balancing
